

## Section 6 Lesson 4 Exercise 1: Data Manipulation Language

### Use DML operations to manage database tables (S6L4 Objective 2)

In this exercise you will populate and work with the data that is stored in the database system tables.

#### Part 1 : Running a script to populate the tables.

You have to consider the order of the tables when populating them. A table that has a foreign key field cannot be populated before the related table with the primary key.

1. Use the table mapping document and list the order that you would use to populate the tables.
2. Open the "sports data.sql" and look at the order the data is being added there, does your list match? This file can be found in the Section 6 Lesson 4 interaction (sports data.zip) and must first be extracted.
3. Run the "sports data.sql" script in APEX to populate your tables
4. Check that no errors occurred when you ran the script.

1) inventory - list  
Items

Price - history

Sales - representatives

sales - rep - address

teams

customers

customers\_addresses

orders

ordered\_items

2) Yes, it is matched

3) Yes, it can successfully run

4) No, there are no errors.

## Part 2- Inserting rows to the system

1. Add a new team to the system

id	name	Number_of_players	discount
t004	Jets	10	5

2. Add a new Customer with the following details to the system

ctr number	email	First name	Last name	Phone number	Current balance	Loyalty card number	tem id	sre id
c02001	brianrog@hootech.com	Brian	Rogers	01654564898	-5	lc4587		

3. This information violates the check constraint that the current balance must not be less than zero. Change the current balance to 50 and rerun the query.

```
① INSERT INTO teams (id, name, number_of_players, discount)
VALUES ('t004', 'Jets', 10, 5);
```

```
② INSERT INTO customers (ctr-number, email, first-name, last-name, phone-number,
                           current-balance, loyalty-card-number)
VALUES ('c02001', 'brianrog@hootech.com', 'Brian', 'Rogers', '01654564898',
        -5, 'lc4587');
```

```
③ INSERT INTO customers (ctr-number, email, first-name, last-name, phone-number,
                           current-balance, loyalty-card-number)
VALUES ('c02001', 'brianrog@hootech.com', 'Brian', 'Rogers', '01654564898', 50, 'lc4587');
```

## Part 1- Updating rows to the system

1. Run the following query to view the content of the price\_history table:

```
SELECT start_date, TO_CHAR (start_time, 'HH24:MI:SS'), price, end_date, TO_CHAR  
(end_time, 'HH24:MI:SS')  
FROM price_history;
```

2. Obl is going to update the price of the premium bat so you will need to write a query that will close off the current price by adding the system date values to the end\_date and end\_time fields. To run this query you will need to both match the item number and identify that the end date is null. This ensures that you are updating the latest price.
3. Rerun the select statement on the price\_history table to ensure that the statement has been executed.
4. Insert a new row that will use the current date and time to set the new price of the premium bat to be 99.99.
5. Rerun the select statement on the price\_history table to ensure that the statement has been executed.

### ① Output:

ID	START_DATE	TO_CHAR(START_TIME, 'HH24:MI:SS')	PRICE	END_DATE	TO_CHAR(END_TIME, 'HH24:MI:SS')
1	17-JUN-17	09:00:00	4.99 (null)	(null)	
2	25-NOV-16	09:00:00	14.99	25-JAN-17	17:00
3	25-JAN-17	17:01:00	8.99	25-JAN-17	19:00
4	26-JAN-17	09:00:00	15.99 (null)	(null)	
5	12-FEB-17	12:30:00	7.99 (null)	(null)	
6	25-APR-17	10:10:10	24.99 (null)	(null)	
7	31-MAY-17	16:35:30	149 (null)	(null)	

### ② UPDATE price\_history

SET end\_date = current\_date

WHERE itm\_number = 'im01101014g' AND end\_date IS NULL;

### UPDATE price\_history

SET end\_time = current\_timestamp;

WHERE itm\_number = 'im01101014g';

### ③

ID	START_DATE	TO_CHAR(START_TIME, 'HH24:MI:SS')	PRICE	END_DATE	TO_CHAR(END_TIME, 'HH24:MI:SS')
2	25/11/2016	09:00:00	14.99	25/01/2017	17:00
3	25/01/2017	17:01:00	8.99	25/01/2017	19:00
4	26/01/2017	09:00:00	15.99 (null)	(null)	
5	12/02/2017	12:30:00	7.99 (null)	(null)	
6	25/04/2017	10:10:10	24.99 (null)	(null)	
7	31/05/2017	16:35:30	149	09/11/2023	11:29

### ④ INSERT INTO price\_history (start\_date, start\_time, price, itm\_number)

VALUES (current\_date, current\_timestamp, 99.99, 'im01101014g');

### ⑤

ID	START_DATE	TO_CHAR(START_TIME, 'HH24:MI:SS')	PRICE	END_DATE	TO_CHAR(END_TIME, 'HH24:MI:SS')
3	25/01/2017	17:01:00	8.99	25/01/2017	19:00
4	26/01/2017	09:00:00	15.99 (null)	(null)	
5	12/02/2017	12:30:00	7.99 (null)	(null)	
6	25/04/2017	10:10:10	24.99 (null)	(null)	
7	31/05/2017	16:35:30	149	09/11/2023	11:29
8	09/11/2023	11:41:33	99.99 (null)	(null)	

## Part 2: Deleting rows from the system

1. Bob Thornberry has contacted Obl to ask that the 83 Barrhill Drive address be removed from the system as he can longer receive parcels at this address. Write a SQL statement that will remove this address from the system.
2. Run a select statement on the customers\_addresses table to ensure that the statement has been executed.

① DELETE FROM customers\_addresses  
WHERE address\_line\_1 = '83 Barrhill Drive',

② SELECT \* FROM customers\_addresses

ID	ADDRESS_LINE_1	ADDRESS_LINE_2	CITY	ZIP_CODE	CTR_NUMBER
1	ca0102 17 Gartsquare Road	Starford	Liverpool	LP89JHK	c00001
2	ca0103 54 Ropehill Crescent	Georgetown	Star	ST45AGV	c00101
3	ca0104 36 Watercress Lane	(null)	Jump	JP23YTH	c01986
4	ca0105 63 Acacia Drive	Skins	Liverpool	LP83JHR	c00001
