Ong kai kuen Azzecoloo section 02

DML3 part 1

Part 1: Creating Natural Joins.

- 1. Display all of the information about sales representatives and their addresses using a natural join.
- Adapt the query from the previous question to only show the id, first name, last name, address line 1, address line 2, city, email and phone_number for the sales representatives.
- (1) SELECT *

 FROM sales_representatives NATURAL JOIN sales_rep_ addresses

 3) SELECT r. first_name, r. last_name, a. address_line_1, a. address_line_2,

FROM sales_representatives r NATURAL JOIN sales_rep_ addresses a;

Part 2: Creating Joins with the USING Clause

Adapt the previous guery answer to use the USING clause instead of a natural join.

a. city, r. email, r. phone_number

- 2. Display all of the information about items and their price history by joining the items and price_history tables.
- (i) SELECT r. first_name, r. last_name, a. address_line_1, a. address_line_2,
 a. city, r. email, r. phone_number

 FROM sales_representatives r JOIN sales_rep_ addresses a;

 USING (id);
- SELECT *
 FROM items JOIN price-history
 USING (itm_number);

Part 3: Creating Joins with the ON Clause

1. Use an ON clause to join the customer and sales representative table so that you display the customer number, customer fist name, customer last name, customer phone number, customer email, sales representative id, sales representative first name, sales representative last name and sales representative email. You will need to use a table alias in your answer as both tables have columns with the same name.

```
D SELECT c.ctr_number AS "Customer Number",

C.first_name AS "Customer First Name",

C.last_name AS "Customer Last Name",

C.phone_number AS "Customer Phone No",

C.email AS "Customer Email", S.id AS "SalesRepid",

S.first_name AS "SalesRep First Name",

S.last_name AS "SalesRep Lost Name",

S.email AS "SalesRep Email"

FROM customers c JOIN sales_representatives s

ON (c.id = S.id);
```

Part 4- Creating Three-Way Joins with the ON Clause

1. Using the answer to Task 3 add a join that will allow the team name that the customer represents to be included in the results.

```
(C. stirst_name AS "Customer Number")

C. stirst_name AS "Customer First Name",

C. last_name AS "Customer Lost Name",

C. phone_number AS "Customer Phone No",

C. email AS "Customer Email", S. id AS "SalesRep id",

S. stirst_name AS "SalesRep First Name",

S. last_name AS "SalesRep Lost Name",

S. email AS "SalesRep Email"

FROM customers c JOIN sales_representatives s

ON (c.id = S.id)

JOIN teams t

ON (c.tem_id = t.id);
```

Part 5: Applying Additional Conditions to a Join

1. Using the answer to Task 4 add an additional condition to only show the results for the customer that has the number - c00001.

```
(i) SELECT c.ctr_number AS "Customer Number",

C.first_name AS "Customer First Name",

C.last_name AS "Customer Lost Name",

C.phone_number AS "Customer Phone No",

C.email AS "Customer Email", S.id AS "SalesRepid",

S.first_name AS "SalesRep First Name",

S.last_name AS "SalesRep Lost Name",

S.email AS "SalesRep Email"

FROM customers c JOIN sales_representatives s

ON (c.id = S.id)

JOIN teams t

ON (c.tem_id=t.id);

WHERE c.ctr_number = cooool;
```

Part 6: Retrieving Records with Nonequijoins

1. Write a query that will display name and cost of the item with the number im01101045 on the 12th of December 2016. The output of the guery should look like this:

The cost of the under shirt on this day was 14.99

```
(1) SELECT 'The cost of the 'lliname ll'on this day was' ll p. price

AS "output"

FROM items i JOIN price_history p

ON i. itm_number = p. itm_number

AND TO DATE ('12-Dec-2016', 'DD-Mon-YYYY') BETWEEN

P. start_date AND p. end_date

WHERE itm_number = im 01101045';
```

Part 1: Use a Self-Join to Join a Table to Itself (S6L9 Objective 2)

- 1. Write a query that will display who the supervisor is for each of the sales representatives. The information should be displayed in two columns the first column will be the first name and last name of the sales representative and the second will be the first name and last name of the supervisor. The column aliases should be Rep and Supervisor.
- (1) SELECT Rep. first name | | ' | | Rep. LastName AS Rep,

 Supervisor. first name | | ' | | Supervisor. LastName AS Supervisor

 FROM sales-representatives Rep JOIN sales-representatives Supervisor

 ON (Rep. supervisor_id = Supervisor.id);

Part 2: Use OUTER joins (S6L9 Objective 3)

- 1. Write a query that will display all of the team and customer information even if there is no match with the table on the left (team).
- (i) SELECT *

 FROM teams t LEFT OUTER JOIN customers c

 ON (t.id = c.tem_id);

Part 3: Generating a Cartesian Product (S6L9 Objective 4)

- 1. Create a Cartesian product between the customer and sales representative tables.
- (1) SELECT *

 FROM customers

 CROSS JOIN sales_representatives;
